

USING THE PROPER STONE CARE PRODUCTS TO PROTECT STONE

Cleaning agent for Rust

ISHICLEAN SERIES
SABI CLEAN

Before (Iron rust)

After

【 USE 】

SABI CLEAN is a cleaning agent for removing iron rust stuck to chemical floors, porcelain tiles, aluminum panels, imitation stone and granite.

- For removing iron rust marks left behind by signs or showcases.
- For cleaning iron rust marks resulting from iron objects, such as nails, left behind.

KONSHO CO.,LTD.

【 USAGE 】

1) Pre-Test

Always test before application. Luster may be lost.

2) Wipe off water

Wet on the rust reduces the effectiveness of SABI CLEAN. Wipe with a cloth or dry completely.

3) Apply SABI CLEAN

Apply SABI CLEAN

4) Reaction

The iron rust turns purple by chemical reaction. Leave for approximately 1 minute.

5) Brushing

When the color becomes deep purple, rinse with water and brush. Be careful that the purplish rinse water does not leave stains

[Notice]

- Don't leave more than 1 minute at chemical reaction. If left for too long, the purple residue may stain materials.
- If you are used for permeable materials such as sandstone that penetrate at short time, please contact us.
- Don't eradicate purple stain using oxidize agent such as peroxide or our ISHI-CLEAN SUPER SP.
- Please be careful that the rinse water became purple doesn't make stain in the other.

6) Finish

If the rust cannot be removed completely, repeat the above process.

【 PRECAUTIONS 】

1. Do not mix with other chemicals. Mixing with oxides such as peroxide in particular and storing in the same place can cause an exothermic reaction.
2. As SABI CLEAN gives off a sulfur odor during application, care should be exercised toward place of application and surrounding area.
3. Good effect may not be achieved when used on oxidized stone or when iron rust rises up from bottom toward the surface.
4. Luster may be lost if used on polished surfaces of natural marble.
